

KOSH Homepage Review — Part B: Frontend & UX Issues

Bugs, broken links, missing functionality, and UX improvements. Requires code changes.

Total items: 10 | Critical: 2 | High: 4 | Medium: 4

B1. Mobile menu is NOT FUNCTIONAL 🚨 Critical

File: `src/components/layout/Header.tsx`

The hamburger button exists but has **no onClick handler**. Mobile users cannot navigate to Business, About, or any other page. Need to implement a mobile drawer/menu.

B2. "Create Account" button hidden on mobile 🚨 Critical

File: `src/components/layout/Header.tsx`

Uses `className="hidden tablet:inline-flex"` — mobile users only see "Get KOSH" (scrolls to footer with broken store links). Mobile has effectively zero signup CTA. Either show the button on mobile or make it accessible via the mobile menu.

B3. App Store / Google Play badges are placeholder links

File: `src/components/sections/FooterSection.tsx` Priority: High

Both store badges link to `#`. Users who decide to download after scrolling the entire page... can't. Link to real store URLs or remove until apps are published.

B4. "Download App" button leads to broken flow

File: `src/components/layout/Header.tsx` Priority: High

Flow: Click "Download App" → scrolls to footer → sees store badges that link to `#`. Either fix the store badge links (B3) or change this button's behavior.

B5. Footer offering cards all link to `/`

File: `src/components/sections/FooterSection.tsx` Priority: High

All 6 cards (USD Account, Global Card, Savings, etc.) have `href="/"` — they navigate to the homepage itself. Link to relevant sections/pages, or make them non-clickable informational cards.

B6. Footer navigation links are mostly `#`

File: `src/components/sections/FooterSection.tsx` Priority: High

Placeholder `#` links:

- For Freelancers, For Individuals, For Businesses, For Crypto Holders
- About (should be `/about`), Blog, Career, Media kit
- Affiliation, Referrals, Contact us

- All legal links (Risk Disclosure, Privacy Policy, etc.)

This damages trust. Link to real pages or remove until pages exist.

B7. Add one inline CTA after feature carousel

File: `src/components/sections/FutureSection.tsx` **Priority:** Medium

After the "Everything your bank can't do" carousel — the natural "I'm convinced" moment — add one "Create Account" or "Get Started" button. The sticky header covers other sections, but this is the peak-interest point.

B8. Add UTM parameters to outbound CTA links

Files: `Header.tsx` , `BusinessCTASection.tsx` , `BusinessContent.tsx` **Priority:** Medium

Current links have no tracking params:

- `https://payout.copperx.io/auth/register` → add `?utm_source=website&utm_medium=header&utm_campaign=signup`
 - Typeform link → add `&utm_source=website&utm_medium=business_cta`
-

B9. Missing og:image for social sharing

File: `src/app/page.tsx` or `src/lib/metadata.ts` **Priority:** Medium

No Open Graph image specified. Sharing the URL on Twitter/LinkedIn/Slack shows no preview image. Add a 1200×630px og:image.

B10. No loading fallback for canvas sequences

Files: `HeroSecondSection.tsx` , `BusinessCTASection.tsx` **Priority:** Medium

Two canvas sequences (360 + 241 = 601 frames) could load slowly on poor connections. No fallback or loading indicator. Consider showing the static mobile fallback image until frames are ready.

Summary: B1-B2 are critical — mobile users can't navigate or sign up. B3-B6 are high priority — broken links damage trust. B7-B10 are improvements.
